

About InfoTame

InfoTame Corporation is a leader in intelligent data-analysis software for Electronic Data Discovery and corporate compliance segments. InfoTame offers a full suite of solutions and services for EDD, from Data Hosting and Web-based Document Review, to Filtering, Search & Retrieval, and Data Analysis.

For the Legal Departments of enterprises, InfoTame's easy-to-use breakthrough technology complements Electronic Content Management tools used to organize mountains of unstructured data. Never before has so much power been available to the General Counsel's office to assure the strictest compliance with Sarbanes-Oxley and other new laws.

**Make Your Case
Save Time
Reduce Costs**

"ITee Legal is a revolutionary product that changes the way lawyers approach discovery. Instead of wading through massive amounts of text in search of evidence, ITee Legal rapidly uncovers significant links between people, events, entities and places, thus dramatically reducing the amount of material to be analyzed. ITee Legal may shorten the discovery process from months to days and reduces the overall expenses significantly."

Build your case in days, not months

Reveal associations others cannot find

See who is connected to whom

If the proof exists, ITee Legal will find it

Win by knowing what others cannot find

If The Proof Exists, ITee Legal Will Find It

ITee Legal

ITee Legal enables legal professionals to extract the facts and relevant documents from volumes of discovery data. This new capability brings vast improvement in productivity, significant overall cost saving, and most importantly, the ability to win cases where facts are buried in mountains of documents.

Build your case

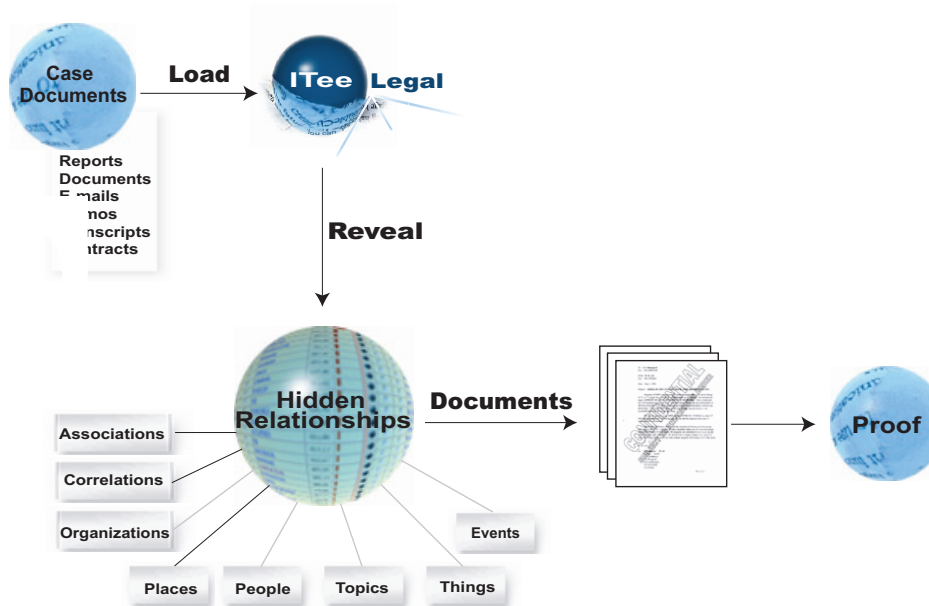

Reveal hidden relationships between people, events, places and timing, swiftly exposing the facts of the case.

Win

Knowledge is power. ITee Legal discovers facts in days, not months, enabling you to focus on winning.

Less Effort, at a Fraction of the Cost

It can take months to review and process 1 million documents. Using ITee Legal, one lawyer can analyze 10 million documents in a couple of days.

"InfoTame's software is very easy to use. I knew what to do after the first 15 minutes of training, and within half an hour, I was led to discover 37 documents that changed our strategy in the prosecution of this case. These documents were buried within 800,000 pages; it would have taken us many months and great expense to find them, if they could be found at all."

Features

Guided Document Search

ITee Legal provides enhanced document search capabilities by finding hidden relationships and redirecting a search into a newly-discovered topic. An easy-to-navigate point-and-click approach enables drill-down queries without losing relevant data.

Complete Content Analysis

Analyze millions of pages of text and extract the most significant entities contained in your search results. Discover correlations and connections between them and build a profile for your case.

Rapid Profiling

Enables side-by-side comparisons of Information Portraits of witnesses, people, organizations, places, events and topics providing objective profiles highlighting similarities, correlations and discrepancies.

Event Chronology

Establishes the time line related to what happened, where, who was involved and who knew what.

Relationship Web

Establishes the relationship between people, places, events, organizations and actions thereby uncovering links that would otherwise be hidden deep within the data.

Focus on Clues

ITee Legal rapidly guides you to a handful of the most important documents containing all the relevant facts distilled from volumes of discovery data.

ITee Legal Technology

Multi-level security and access rights guarantee confidentiality and information security.

Multi location access is enabled via a Web-based, easy-to-use point-and-click user interface.

Highly efficient mathematical algorithms based on Statistical Spectral Content Analysis (patent pending) provide unsurpassed speed and accuracy.

Objective, language independent technology enables the analysis of multi-language documents.

Allows integration with any text-data source: MS-office docs, HTML, e-mails and various databases.

Highly scalable - from laptop to distributed server topologies handling terabytes of data.
