

InfoTame™ Software

Analytics for Millions of Documents in Minutes

Successful businesses take advantage of information hidden in massive amounts of text. Traditionally, this required significant investments in people and time. Using InfoTame, one person can analyze millions of documents in a couple of hours. InfoTame is a powerful tool that distills essential information from email, HTML, Word and Office documents onto a single page, creating a breakthrough in analysis and comprehension.

Applications

Use InfoTame to unlock the power in your data and maximize your productivity, significantly reduce costs and uncover information you did not know existed. InfoTame provides new dimensions of insight into any business that is overwhelmed with massive amounts of data.

Legal/Litigation

Find evidence buried in millions of pages

CEO/CFO compliance

Validate what is behind the numbers

CRM/Business Intelligence

Anticipate customer needs, model & predict behavior, improve retention

PLM/Document Management

Profile your document repositories with respect to any object

Financial/Economic Analysis

Extract trends and leading indicators from text

Biotech/Pharmaceuticals

Expose critical correlations among components in clinical trials, shorten time-to-market

Media

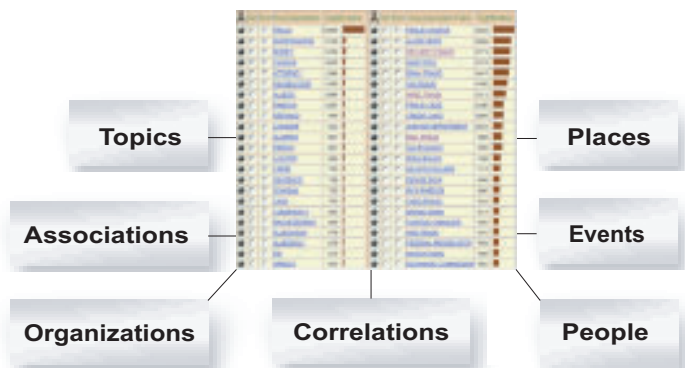

Uncover the story behind the story

Security/Intelligence/Law Enforcement

"Connect the Dots", discover new leads

Information Portrait

Comprehending the content of a million documents requires InfoTame's exclusive Information Portrait™. Without reading a single document, InfoTame exposes all significant subjects, events, people, topics, places and organizations. This one page presentation allows you to effectively use, navigate and analyze relationships critical to your business. InfoTame analyzes the full content of each document assuring that all significant items are presented. Never before has so much power been available to business decision makers.

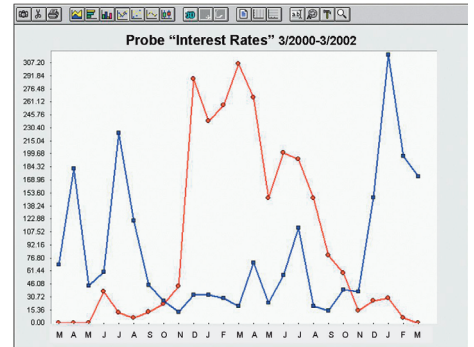

Analyze Trends

Analyze trends in information and discover "Who Knew What When". These trends can be graphed in a variety of ways for easy comprehension and presentation.

In the example on the right InfoTame started with the query "interest rate". The trend for "economic recovery" versus "economic slowdown" can then be graphed based on 1.2 million news clips for easy comprehension. InfoTame effectively turns text-based information into quantifiable results.

InfoTame Technology

InfoTame is a unique analytical tool that reduces text data to statistical elements. Highly efficient algorithms based on "Statistical Spectral Content Analysis" (patent pending) provide unsurpassed speed and accuracy. The language-independent technology enables the analysis of documents in any language. InfoTame's multi-level security and access rights guarantee confidentiality and information security. InfoTame can be easily integrated into existing environments providing access from multiple locations via an easy-to-use, web-based, point-and-click user interface. InfoTame can be used as a standalone or as a distributed solution across multiple servers handling terabytes of data.

About InfoTame

InfoTame Corporation is a leader in intelligent information-analysis software for the enterprise. InfoTame's solutions provide the quickest and most accurate way to extract information from massive amounts of text data in real time. InfoTame's easy-to-use breakthrough technology complements today's content management and search tools used by enterprises to manage unstructured data.
